MONTHLY WEATHER MAP

JANUARY 1961

General Summary of Weather Conditions

During the first half of January 1961 the general circulation of air was from west to east across Canada, producing much above normal temperatures in the west, and near normal conditions in eastern Canada. The westerly flow brought frequent Pacific storms and an abundance of precipitation to southern British Columbia. On the Atlantic coast a number of severe storms brought heavy snowfall and wintery conditions to the Maritime provinces. The circulation pattern changed abruptly on January 18th, when cold Arctic air plunged southward across the central and eastern parts of North America. From then to the end of the month eastern Canada suffered abnormally cold weather, while a flow of air from the south associated with this pattern brought a marked warming to the Yukon.

Mean temperatures for the month were generally above normal in the western half of the country, and below normal in the eastern half. The greatest positive anomalies were twelve degrees in the Lethbridge,Alberta area, while in the Eastern Townships of Quebec there were a few deficiencies of nine degrees. Precipitation was two or three times normal at a number of stations in southern British Columbia, but elsewhere in Canada January precipitation was normal or below normal. The greatest deficiency of precipitation was observed in southern Manitoba and southern Ontario. In both these regions many stations experienced deficiencies of eighty per cent.

The first half of January was marked by a series of active Pacific storms in British Columbia affecting particularly the southeast corner of the province. The most severe of these storms was probably that on the 15th, when Patricia Bay reported a 24-hour precipitation total of 3.24 inches, and Hope 4.68 inches. The heaviest fall in the province was that reported at Seymour Falls where 2.89 inches on the 13th was followed by 12.37 inches on the 14th and 3.87 on the 15th for a three day total of 19.13 inches. Severe flood and washout conditions resulted in southern British Columbia from this storm. During the last fifteen days of the month the province came under the influence of an area of high pressure and the weather was generally more settled. For the month as a whole precipitation totals averaged about twice normal on Vancouver Island and the lower half of the Fraser River Valley. There were small excesses along the northern section of the British Columbia coast, while in the southern interior valleys of the province there were deficiencies ranging to fifty per cent.

Temperatures were generally mild throughout the province during the first fifteen days of January while most stations reported their coldest temperature of the month on the last few days. The coldest temperature in the province was reported from Lower Post near the Yukon boundary, where minus forty-two degrees was reached on the 30th. Mean temperatures for the month were four to seven degrees above normal along the coast, six to eleven degrees above normal in the southern interior, and one to four degrees above normal in the northern interior.

For the first three weeks of January, low pressure areas moving in from the Pacific Ocean forced mild air over the Rockies to give Chinook conditions in southern Alberta, and mild dry weather across the remainder of the grain areas of the Prairie Provinces. In southern Alberta this was one of the mildest Januarys in recent years, with daily high temperature records broken. In southern Manitoba the weather was cold during the last two weeks to average up the mild weather of the first part. Mean temperatures for the month were eleven to thirteen degrees above normal in the Lethbridge area, four to nine degrees above normal in the remainder of Alberta and throughout the southern half of Saskatchewan, and one or two degrees above normal in southern Manitoba.

Snowfall was light throughout the Prairie Provinces, as Chinook conditions kept southern Alberta snow-free for most of the first three weeks of the month. A general dust storm developed near Calgary on January 27th and swept wouthward over Lethbridge. It lasted about four hours, a most unusual occurrence for January. There were precipitation deficiencies of thirty to eighty per cent in all districts except the northern half of Manitoba where Churchill and Brochet received more than twice the normal fall for the month.

January was cold and dry throughout the province of Ontario. At the beginning of the month temperatures were very cold in the northern part of the province, not far from normal in the southern sections. From the 19th to the end of the month southern Ontario experienced one of the coldest periods on record with the temperature failing to rise above twenty-five degrees at any station during this whole period. For the month as a whole mean temperature were five to nine degrees below normal in southern Ontario, three to six degrees below in most Ontario districts, one or two degrees below normal in Kenora and Rainy River, and one degree above in Patricia.

Winter storm tracks remained well to the south of the province of Ontario throughout the month due to the domination of the province's weather by large cold high pressure areas. As a result precipitation amounts were low in comparison to normal in all sections of the province, and due to the severe cold, rainfall was extremely light. At Toronto,Malton Airport reported the lowest precipitation for any January on record. For the month as a whole there were precipitation deficiencies of sixty to ninety per cent throughout the southern and western parts of the province, and thirty to sixty per cent in the northern and northwestern districts.

January weather was sunny and cold throughout the southern sections of the province of Quebec. From the 19th to the 26th, Montreal experienced the longest cold spell on record for the past twenty years. During the same cold spell Quebec Airport reported new low temperatures for the day every day from the 20th to 24th inclusive, the records here extending back eighteen years. Mean temperatures for the month were six to ten degrees below normal in the Montreal area and the adjacent parts of the eastern townships, four to eight degrees below normal in the remainder of the southern half of Quebec, and normal to three degrees below normal in the northern sections.

Because of the cold weather, January rainfall was extremely light, a few stations in the Montreal area recorded a few hundredths of an inch on the 7th, but elsewhere in the province there was none. Snowfall also was generally light. There were small excesses of total precipitation at a few stations along the Saguenay River but elsewhere in the province precipitation was twenty to sixty per cent below normal.

January was a stormy month in the Maritime provinces. On the first freezing rain and drizzle were general over the area and were accompanied by over a foot of snow at many stations in New Brunswick. This was followed on the 4th by a severe storm in which Halifax received nineteen inches of snow to tie up all transportation in the city. Other storms followed on the 8th, 11th, 14th and the 16th. Probably the most severe storm of the month affected the district on the 20th and 21st, it was accompanied by strong winds with gusts over sixty miles an hour. Sydney and Moncton each received over a foot of snow on this occasion and Summerside, P.E.I. reported almost twenty inches. Most of these storms brought the largest snowfalls to stations exposed to northeast wind, so that for the month as a whole stations on Prince Edward Island reported two or three times the normal fall, while there were excesses on Cape Breton Island and along the north shore of New Brunswick. In the interior of New Brunswick and in the southern sections of Nova Scotia there were deficiencies amounting to twenty or thirty per cent.During the first eighteen days of the month temperatures were variable over the Maritime provinces as successive storms altered the circulation pattern. From the 19th to the end of the month temperatures were cold throughout the area. At Halifax the closing thirteen days of the month saw the thermometer remaining continuously below twenty-five degrees, the first time that this had occurred in eighty-eight years of record. For the month as a whole temperatures averaged five to eight degrees below normal in New Brunswick and on Prince Edward Island, and three to six degrees below normal in Nova Scotia.

During the first three weeks of January, temperatures were mostly above normal on the Island of Newfoundland. From the 21st onward temperatures dropped sharply so that for the month as a whole the average was one to three degrees below normal.

Snowfall was heavy at almost all stations. It was particularly heavy at St. Andrews which recorded forty-four inches against a normal for January of fourteen inches. Severe storms occurred on the 21st and 26th. On the 21st Gander Airport reported over a foot of snow while at St. John's Airport, where the snow was much lighter,a peak gust of 97 m.p.h. was experienced. For the month as a whole heavy snowfall was counterbalanced by subnormal rainfall so that precipitation as a whole was ten to forty per cent below normal along the south coast. There were excesses ranging to sixty per cent along the west coast.

Along the Labrador coast January temperatures were one to three degrees above normal, while precipitation totals generally ranged to forty per cent above normal except at Hopedale which reported almost two and a half times the normal fall.

In the Yukon Territory a flow of air from more southerly regions in the latter half of the month brought mean temperatures generally above normal. Excesses ranged to four degrees at Dawson and Mayo and to three degrees at Whitehorse. Precipitation for the month was close to normal along the southern border and at Dawson. There was a small deficiency at Whitehorse, while Snag and Aishihik experienced deficiencies of about seventy per cent.

Mean January temperatures were four to five degrees above normal in the vicinity of Great Slave Lake but elsewhere in the Northwest Territories there were deficiencies of which the greatest was eight degrees at Clyde. Coppermine was the runner-up with a deficiency of seven degrees.

Around Great Slave Lake, January precipitation totals were one and a half to two and a half times the normal fall. Almost all other stations on the mainland portion of the Northwest Territories experienced precipitation deficiencies ranging to ninety per cent, except Fort Simpson which experienced an excess of ninety per cent. On the islands of the Arctic Archipelago most stations reported deficiencies of fifty to ninety per cent, except for Isachsen and Eureka which experienced large excesses.

JANUARY 1961
TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
